

Pharma Manufacturing Intelligence Report

Query:

what is GMP?

Analysis:

Good Manufacturing Practice (GMP) refers to a system of regulations, standards, and codes designed to ensure that products are consistently produced across the quality expectations that safety can rely on. It encompasses all aspects of production; from raw material selection through to manufacturing, testing, labeling, distribution, etc., as applicable in various industries such as pharmaceuticals, medical devices, cosmetics, and others where product purity and quality are paramount for ensuring consumer safety.
